

Mohammed Rahim

Python Developer

+91-9597404169 | mohammedrahim625002@gmail.com | www.linkedin.com/in/mohammed-rahim-s-1b75292b4

PROFESSIONAL SUMMARY

Motivated and detail-oriented Python Developer and aspiring Data Scientist with strong foundations in Python, data analysis, machine learning, and statistical modeling. Skilled in handling datasets, building predictive models, and creating data-driven insights using tools like Pandas, NumPy, Scikit-learn, and Matplotlib. Adept at transforming raw data into actionable insights through exploratory analysis and visualization. A quick learner with a problem-solving mindset, eager to apply analytical and programming skills.

EDUCATION

Bachelor of Commerce with Computer Application
M.S.S WAKF BOARD COLLEGE, Madurai, Tamil Nadu.

Expected Graduation: 2025
CGPA: 6.47/10

TECHNICAL SKILLS

- Programming Languages:** Python, SQL
- Python Libraries:** Pandas, NumPy
- Databases & Querying:** Oracle SQL, SQL Joins, Data Extraction, Query Optimization
- Web Technologies:** HTML, CSS
- Tools & Environments:** VS Code, Jupyter Notebook, Microsoft Word, PowerPoint

PROFESSIONAL EXPERIENCE

Data Analyst Intern
QSpiders, Bangalore

June 2025 – Present
Tools: SQL, Excel, Power BI

- Extracted, transformed, and cleaned sales data from 3 relational tables (25,000+ records across 12 months and 5 regions) using optimized SQL queries and joins.
- Performed exploratory data analysis (EDA) to uncover regional sales trends, product performance, and return patterns.
- Developed 10+ dynamic KPIs and business metrics using DAX in Power BI to monitor sales performance and post-festival recovery.
- Designed interactive, multi-page Power BI dashboards with slicers, filters, and drill-down capabilities by region, time, and product category.

PROJECTS

Hotel Management System – ML/AI Project

- Developed an ML-driven hotel management system to automate room allocation, booking prediction, and customer preference analysis.
- Implemented machine learning models to forecast demand, optimize pricing, and enhance operational decision-making.
- Utilized Python, Pandas, NumPy, and Scikit-learn for data preprocessing, feature engineering, and predictive modeling.
- Built interactive visualizations using Matplotlib/Seaborn to present insights on occupancy trends, customer behavior, and revenue patterns.

Airline Reservation System – Python Project

- Developed an Airline Reservation System using Python to centralize booking and customer reservation data.
- Implemented efficient data storage and retrieval functions to improve data accessibility and system performance.
- Designed user-friendly workflows to streamline reservation processing and enhance operational efficiency.
- Improved overall passenger experience by automating key booking tasks and reducing manual errors.
